TAKE BACK CONTROL OF YOUR MAILING PROJECTS

Frustrated over increasing costs and lack of control associated with outsourcing larger mailing projects? Now you can manage all your mailings in house – even the most complex tasks. Hasler's M7000 Folder/Inserter makes it incredibly easy for virtually anyone to handle mailing projects quickly, efficiently and accurately, while saving you money.

Collate, Fold and Seal Up To Ten Inserts In One Pass

This robust, versatile, automatic folder/inserter system boosts productivity by enabling busy offices and mail centers to process peak mailings at a rate of 4,000 filled envelopes per hour. With PowerFold technology, you can collate and fold up to ten pages, then neatly insert and seal documents in a single pass, stapled or loose. This allows you to automate all your mailings, including letters, checks, cards, invoices, statements, marketing materials – even pre-folded flyers. Folds include standard letter, single, Z, double parallel and bottom addressing.

Modular Design Offers Maximum Flexibility

This flexible desktop folder/inserter can be configured with two-, four- or six-feeder stations and customized to meet your specific needs. All six multi-functional FlexFeed® feeder stations can handle short inserts from 3 ½" x 5" to full sheets up to 14" in length. And special feeders can also be set up to accommodate a variety of items like glossy and thin stock. Plus, an optional high capacity feeder can be added to hold up to 325 Business Reply Envelopes (BRE), Business Reply Cards (BRC) or 1,200 full sheets for high volume applications.

M7000

- **Fill and Start** – easy to use automatic job setup is quick and simple
- **Color Touch Screen** – reversible color touch screen – allows for easy accessibility and flexibility
- **PowerFold Ten** – Collates and folds up to ten sheets
- **Machine Accessibility** – clamshell design provides quick access during any stoppage
- **Quiet Operation** – lowest noise level in the industry – suitable for office environments
- **Flexibility** – handles various sizes, both coated and glossy paper stocks, as well as daily mail applications
- **High Productivity** – processes 4,000 filled envelopes per hour – among the highest in its class
- **Large Capacity** – up to six feed trays each holding up to 325 pieces
- **Security** – OMR capability ensures sensitive jobs like payroll and statements are processed error free

Continuous Processing for Larger Runs

The M7000 allows cascade production feeding so the next feeder tray starts when the prior tray runs out. This feature enables the machine to process up to 1,950 pieces unattended. If you choose the high capacity feeder option, the maximum total soars to 2,825. And empty feeders can be reloaded on the fly without interrupting the job for virtually limitless runs.

Just "Fill and Start"

M7000's easy "Fill and Start" feature means no operator training is needed. You simply load your documents and envelopes and initiate the job. The M7000 automatically calculates the size of the documents and sets the correct fold.

All job settings and program operations are controlled from a reversible color touch screen, with an easy-to-read LCD display that prompts the operator and reduces the opportunity for errors.

Double Document Detection System Guarantees Mail Integrity

The M7000 is equipped with an automatic Double Document Detection (DDD) system that ensures the correct number of inserts per envelope. State-of-the-art electromechanical sensors provide continuous and superior accuracy.

The feeder DDD feature detects double feeds and incorrect thickness, while the insert DDD feature checks for correct thickness of the whole set right before insertion. So every piece that is processed has been checked twice.

Optical Mark Recognition (OMR) Software Options Ensure Correct Collation

Optical Mark Recognition software allows the M7000 Folder/Inserter to process sensitive jobs with varying numbers of pages easily and accurately. Hasler's unique software options enable the printer to generate the OMR marks necessary to perform these mailings. The combination of these state-of-the-art features prevents you from sending personalized documents to the wrong addressee. The user can designate any feeder as the OMR station, maximizing job flexibility.

Divert Selected Documents On The Fly

The Automatic Divert Station redirects faulty or selected documents into a separate exit tray and continues to process the job without interruption. This feature can also be used in conjunction with OMR to divert items by zip code, name, invoice amount and other criteria to eliminate unwanted or unnecessary mailings without interrupting the rest of the run, saving time and postage.

ENVELOPE SEPARATOR – EASY TO ADJUST THICKNESS SETTINGS
